The Emotional Quotient Inventory (EQ-i) 2.0 is a revision of the EQ-i (Bar-On from 1997 and 2004). The reference group for which the EQ-i 2.0 scores are compared to is representative of the general population in North America. The age range of the Emotional Quotient Inventory (EQ-i) 2.0 is 18 years and older. The average time it takes to administer this instrument is 20 to 30 minutes per participant. Applications of emotional intelligence include: team building, student development, leadership development, organizational development and executive coaching. The Emotional Quotient Inventory (EQ-i) 2.0 measures the interaction between an individual and their environment. The results are then presented in numerical and graphical form.

Reliability and Validity

Since the EQ-i 2.0 is a revision of the original Emotional Quotient Inventory (EQ-i) the standard platform of the EQ-i validation remains intact. The EQ-i was the first scientifically validated instrument and now coupled with the EQ-i 2.0 is the most widely used emotional intelligence assessment worldwide.

Administration, Analysis and Reporting

Statistics Solutions consists of a team of professional methodologists and statisticians that can assist the student or professional researcher in administering the survey instrument, collecting the data, conducting the analyses and explaining the results.
